

Plot 1: Open loop running slightly rich (14.5-14.6) looks pretty good

Plot 2: Same fuel map closed loop using wide band nbo2 simulator. o2 adjust approx 0-11

Plot3: Same fuel map closed loop o2 sensor adjust approx 0-11 like run 2 above

Plot 4: Same fuel map Closed loop o2 sensor adjust approx -6 to +3. Numbers make more sense but what happened to the plot format?
