## Handling kit 924/944/968

From our friends at Swiss-based Deutsch Nine comes this comprehensive handling kit for the 924 through 968.

Designed to work with the KW Variant 3 coilover suspension kit, this really is a complete package – it is said to dramatically improve the torsional rigidity of the chassis, eliminate any unwanted movement in the suspension and, of course, improve the agility of the car. The handy numbered components shown here are:

1. Lightweight strut brace made from steel and aluminium
2. Adjustable uniball top mount camber plates
3. KW Variant 3 front coilovers
4. Rebuilt uniball-equipped track control arms
5. Uniball transverse control arm bearings
6. O-structure under chassis brace
7. Rebuilt lightweight rear axle with torsion bar deletion and one-piece struts
8. Uniball rear stabilizer solid linkage kit
9. KW Variant 3 rear coilovers
10. Rebuilt backlash-free guide arms

At 3750 Euros (excluding the KW coilovers) the kit may not be cheap, and it's probably unlikely to find its way on to many 924s, but it's sure to transform the handling of Porsche's most popular front-engined machines and components are available individually too. ## Snooping out the cameras

Performance Products has launched the Snooper 3Zero, a revolutionary new combination radar detector with GPS technology. The new device will locate fixed speed cameras using GPS and the renowned AURA database. The unit will also detect the radar and laser waves that are transmitted by the majority of police speed guns. Given that the number of speed cameras has tripled in the last decade, and the number of speed camera offences hit 1,865,000 in the last year, then such technology must surely be essential to any keen driver.

The Snooper 3Zero is priced at £149.99 inc VAT. For
