

At **87c/188F** (per Bruce Anderson's hi-performance book) for a 964, **83c/181F** for a 993 (per manual), the oil cooler thermostat opens and oil starts to flow to the cooler.

At **212F or 230F (993)**, the thermosender—via the control unit—starts the oil cooler fan in slow speed.

At **239F (964)**, the oil cooler fan switches to fast speed. The 993's fast-speed set-point is unknown
