

## SUNOCO RACE FUEL

Price paid 352.5p/litre  
Max power 218bhp @ 5200rpm  
Max torque 248lb ft @ 2500-2800rpm

Mixes it with BP Ultimate initially, but beyond 3500rpm it's well clear of the pump fuels, as expected. Storms to highest peak power, though the flat-topped curve suggests it's capped. So costly, only justifiable in a race car (with a high compression ratio), where a second a lap is a lifetime. Driver notes (tried after 2nd batch of BP Ultimate): 'Felt like it kicked hard low down and then kicked again at about 4000rpm, when it just took off.'
