Oil Consumption / MY2007 Sports Cars

Binder - Advanced Technical Information

Vehicle Type: **All Sports Cars**

Model Year: **MY 2007**

Information: As of Model Year 2007 you will find the "Maximum value for Engine oil consumption" in the Owner's Manual - Technical Data / Engine Data.

For "All Sports Cars" the following value is shown:

Engine Oil Consumption up to 1.5 liters / 1000km (1.6 quarts/622 miles)

Work procedure: In the event of a complaint, the engine oil level and oil consumption must be checked according to the following specifications.

Requirements

- The vehicle must be parked on a level surface
- The engine must be at operating temperature (coolant temp.) > 176° F (80° C)
- The engine must be switched off
- Allow the engine oil to drain back into the oil pan

Note:

In order to obtain a correct measured result, wait for 10 minutes after switching off the engine before measuring the oil level.

Without overfilling, adjust the engine oil level to "maximum" after the measurement. To determine the exact oil consumption, the customer must return to the workshop for a second measurement after a mileage of between 622 miles (1,000 km) and 1,244 miles (2,000 km).

No additional oil is to be added between the measurements.

The second measurement must be carried out according the specifications listed above.

The mileage of the car and the determined oil level must be documented with every measurement.

Literature: Owner's Manual:

- > Chapter "Controls, Instruments" OIL - Display and measurement of engine oil level
- > Chapter "Maintenance, car care" Engine oil level
