

Overview of Approved Engine Oils

Information

This list of approved engine oils replaces Manufacturer Approval No. 20/07 dated December 21, 2007.

Vehicle Type: **All Porsche standard-production vehicles with the exception of the Porsche Cayenne V6 3.2 and V6 3.6 DFI.**

The engine oils for the Porsche Cayenne V6 3.2 and V6 3.6 DFI are listed in a separate bulletin.

Model Year: **As of 1984**

Concerns: **Overview of engine oils approved by Porsche, "Porsche approval list".**

Information: **Approved Oil Availability** Porsche approved oil availability varies by global region. Some oils on the following "Approved List" may not be available in certain regions of the North American market, or, may only be available in overseas markets exclusively.

When searching the "Approved List" for a particular manufacturer or brand name, keep in mind that the below listed "Sales Region Codes" are marketed for the North American region:

- CAN—Canada**
- USA—United States of America**
- WW—World-Wide**

Information

Only **oils approved by Porsche** are to be used for the vehicle types listed. Older approval statuses must no longer be taken into consideration. However, remaining supplies of engine oil as specified in the previously valid Manufacturer Approval No. 20/07, dated December 21, 2007 can be used up to December 31, 2008. Please observe the "**Valid until DD/MM/YY**" column in the oil approval table provided below.

Oil Quality: The engine oil is not only a lubricant, but also fulfils many functions at the same time such as component cooling, component cleaning, and protection from corrosion. To be able to fulfil these tasks, the oil contains specially developed additives.

Mineral oils are extracted directly from crude oil. Using a series of chemical processes, these oils can be further refined (hydrocracked oils) or completely transformed (synthetic oils). These oils provide a higher level of performance than pure mineral oils.

Only hydrocracked or synthetic oils are now approved by Porsche.

Non-Seasonal Light-Running Oils: Non-seasonal oils are distinguished by their low viscosity at low temperatures as well as a high level of temperature stability and a particularly low tendency to evaporate at high temperatures due to their composition. Oils that meet such high performance requirements can be used as non-seasonal oils while taking into consideration the correct temperature range (see the "Temperature ranges" point). These oils also have good light-running properties because of their low viscosity at low temperatures and can therefore be referred to as non-seasonal light-running oils.
Only non-seasonal light-running oils are now approved by Porsche.

Viscosity: The viscosity of an engine oil is specified by the SAE viscosity class. The first number and the letter W (winter) identify the viscosity at low temperatures. For example: 0W or 5W, where 5W is more viscous than 0W. The second number indicates the viscosity at high temperatures. For example: 40 or 50, where 40 is less viscous than 50 at the same temperature. Multi-grade oils are identified by both viscosity specifications. For example: SAE 0W-40 or 5W-40 or 5W-50.
Examples:
0W-40 and 5W-40 oils have the same viscosity at high temperatures. However, at low temperatures, the 5W oil is more viscous.
5W-40 and 5W-50 have the same viscosity at low temperatures, but at higher temperatures, the oil with viscosity class 40 is less viscous.

Temperature Ranges:

Above -25 °C:	All oils approved by Porsche for the vehicle type to be considered.
Below -25 °C	All oils approved by Porsche for the vehicle type to be considered which have a viscosity of SAE class 0W in the low temperature range.

Miscibility: The engine oils approved by Porsche can be mixed with each other. This means that it is not necessary to flush the engine when the oil is changed if another type of oil is used. However, since every brand of oil has a specially adapted unique composition, the same oil should be used for topping up between oil change intervals if possible.

Sales Areas: The respective sales area is also listed in order to clarify where the approved oils are available. Here are the meanings of the symbols:

WW	Worldwide	ESP	Spain
EU	Europe	FIN	Finland
E-EU	Eastern Europe	FRA	France
USA	United States of America	GB	Great Britain and Northern Ireland
M-America	Central America	IRL	Ireland
N-America	North America	JAP	Japan

Overview:

Information

We have reached an agreement with the oil companies which involves setting a time limit on the validity of our engine oil approvals.

The period of validity is between 2 and 3 years. The expiration date of the approval is given in the last column in the list.

Once this validity period has elapsed, the approval in question is revoked unless an extension is requested by the relevant manufacturer.

Important Notice: Porsche Cars N.A Technical Bulletins are intended for use by professional technicians, not a "Do-it-yourselfer." They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Special tools may be required to perform certain operations identified in these bulletins. Use of tools and procedures other than those recommended in these bulletins may be detrimental to the safe operation of your vehicle. Properly trained technicians have the equipment, tools, safety instructions and know-how to do a job properly and safely. If a condition is described, do not assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your Porsche Dealer for information on whether your vehicle may benefit from the information. Part numbers listed in these bulletins are for reference only. Always check with your authorized Porsche dealer to verify correct part numbers.
