

Re-Usable Vinyl Graphics Installation Instructions

SAVE YOUR SHIPPING SLEEVE FOR GRAPHICS STORAGE. FOLLOW THESE PROCEDURES IN A NON WINDY LOCATION, PREFERABLY INDOORS. DOING SO WILL INCREASE THE LONGEVITY OF THE MATERIAL'S TACKY BACKING, AND LONG TERM RE-USABILITY.

Clean vehicle surface (door/hood) where graphic will be placed. This is vital to the longevity of the graphic. The back of the placard is tacky, and dirt will lesson it's 'sticky'.

Remove Graphic from backing paper (SAVE the backing paper-required for storage).

Holding the graphic by the left/right ends, (near the middle), place the TOP INCH of the graphic against vehicle (align with body panels/seams/windows/etc), and let it adhere. Move your grip down to the bottom left/right corners, while still holding the rest of the graphic off the vehicle (but the top is slightly stuck in place). While holding the bottom of the graphic taught between your hands, put the bottom of the graphic against the vehicle. The graphic should be held in place, but will most likely have air bubbles that will need to be squeegee'd out, using the squeegee included in your kit.

To squeegee out the air, start at the middle of the graphic and move outward with firm pressure, and overlapping strokes. You can do top to bottom, right to left, which ever works best. Small air bubbles (size of a dime) will not affect the adhesive performance....but it's best to get them out, especially near the front of the graphic.

You can also use the strips included in your kit to hold down the leading edge of the graphic. This is highly recommended at any event with speeds over 60mph. It IS necessary to use the front edge strips if you will be using the re-usable vinyl at an event when precipitation is expected.

NOTE: Some customers like to 'wet' the surface area of the vehicle before applying the graphic, as it helps to rid the graphic of air bubbles. If you decide to do this, it's best to use a sprayer filled with water, and a few drops of baby shampoo. Use very little spray! Just be sure that the graphic 'dry' a bit before high speed use (an hour). Also note that it may affect the longevity of the adhesive on the back of the graphic.

Removal and Storage

When finished with the graphic, and ready to remove....lift up from both bottom corners, keeping the graphic taught in between your hands. Slowly, gently pull the graphic off the vehicle from the bottom to the top (you can also start at the top and move down). Once you have the graphic off the vehicle, place it immediately back on the backing paper, and squeegee it into place. Repeat for all graphics. Store the graphics in the provided packaging/shipping sleeve for your next event.
