

PORSCHE

Dear Taycan Enthusiast,

Porsche will soon add a new chapter to its history as the new Taycan arrives in the United States. Among the first Taycan models to arrive will be the Model Year 2020 Taycan Turbo.

The estimated EPA [range](#) for the Taycan Turbo is 201 miles.

In preparation for the Taycan launch in the United States, Porsche asked AMCI Testing to conduct independent tests to evaluate the Taycan Turbo range to help customers make more informed decisions. AMCI Testing is an independent automotive research firm, specializing in unbiased evaluations of automotive products.

Tested on AMCI Testing's "City/Highway Commute Cycle" route on public roads in and around Southern California, the results were calculated by averaging the vehicle's performance over five test cycles. The Taycan Turbo achieved a range of 275 miles.

More information on AMCI Testing's results can be found at www.amcitemesting.com/taycan. As with all battery-electric vehicles, the actual range of the new Taycan Turbo may vary due to driving conditions, personal driving and charging habits, and battery age.

For more information on the new Taycan, please visit our website at www.porsche.us/taycan and stay in touch with your local authorized Porsche dealership.

Sincerely,

Porsche Cars North America, Inc.
